Subject: Reminder: GHSA reports due to UCD Friday, January 20

Hi GHSA-ers,

Happy 2017. It was great to see or meet many of you at this week's Semi-Annual Consortium meeting. The year in California is off to a wet and wonderful start.

As usual, **monthly GHSA reports for African countries are due to UCD by the 20th** of the month.

We ask that you **please submit your reports again in Word document format**, as this facilitates the review and editing process.

Feedback from USAID on couching PREDICT activities in the GHSA reporting framework continues to evolve, with current recommendations indicating that we should...

- Situate each bullet in either the Zoonotic Disease / Mechanisms box or the Lab Systems / Lab Testing box - *no need to consider other APs or Indicators at this time*
- Describe how each bullet relates back to the 'traffic light' level system. *This will help us show progress against the GHSA indicator capacity levels over time. Most Indicator capacity levels are fairly standard, but the reporting templates are attached here for easy reference to any country particulars.*

As always, we are happy to (attempt to) answer any questions on GHSA reporting that come up in the writing process. Things are certain to change again, so thank you for your continued adaptability.

Best regards,
Nicole
